

ABSTRACT

- 5 The present invention relates to a
photocurable liquid resin composition comprising: (A) a
cationically polymerizable organic compound; (B) a
cationic photopolymerization initiator; (C) an
ethylenically unsaturated monomer; (D) a radical
10 photopolymerization initiator; (E) a polyether polyol
compound having one or more hydroxyl groups in one
molecule; and, optionally, includes elastomer particles
having a specific particle diameter and/or an epoxy-
branched alicyclic compound.
